

Miner Lake Sewer Initiative

The Miner Lake community is exploring a sewer project to enhance property values, protect the lake's natural beauty, and ensure a sustainable future for all residents

A community wastewater system will offer:

Increased Freedom

- Host family and friends, enjoy longer showers and more frequent laundry without concerns about septic limitations
- Have greater flexibility when making property improvements

A Long-Term Solution

- Provide a reliable, lifelong wastewater management system
- Reduce the unpredictability and high costs and negative resale impact associated with aging and failing septic systems

Enhanced Water Quality

- Aging and undersized septic systems negatively impact Miner Lake's water quality
- Implementing a sewer system will mitigate the introduction of harmful substances, allowing the lake to recover and thrive

For more detailed information and the latest project updates visit the Sewer Project page on the Miner Lake website, minerlake.com or reach out to a committee member:
